

ABSTRACT OF THE DISCLOSURE

An HDD, in which a magnetic head is moved in a substantially radial direction of a rotating magnetic disk to record and reproduce data on and from the disk,  
5 has an FPC that has a head IC. The FPC has a board and a flexible cable. The board has three chip resistors and a connector pin. The head IC is mounted on the distal end of the flexible cable. To identify the head IC, a probe of an inspection apparatus is connected to  
10 the connector pin, thereby to measure the impedance of the chip resistors.
